

Alex Jordan Perez Rojas

SOFTWARE DEVELOPER

Passionate telematics engineer focused on technology and continuous learning. My daily motivation is staying at the forefront of technological development, acquiring new skills, and mastering the latest tools and languages. I consider myself a creative and analytical person, with strong abilities to address and solve complex problems efficiently.

GitHub: <https://github.com/AlexPerez31>

DEVELOPER PORTFOLIO: <https://sites.google.com/view/alex31>

SKILLS:

Containers, Servers, and Processes: Azure, Docker, Celery, Redis.

Programming Languages: Python, JavaScript, Java, C++

Backend: Django, FastAPI, API REST, Node.js, JSON, SQLAlchemy, Poetry, Alembic, Swagger, OpenAPI.

Frontend: Angular, HTML, CSS, React, Bootstrap, Highcharts, Tabulator.

Relational Databases: PostgreSQL, MySQL.

Non-Relational Databases: MongoDB, Firebase.

Version Control: GIT, GitHub, Bitbucket.

Agile Methodologies: SCRUM, Jira, ClickUp.

Data Visualization Tools: Metabase, Pandas, Jupyter.

IDEs: Android Studio (Java), Eclipse, NetBeans, Visual Studio Code.

WORK EXPERIENCE:

Software Engineer

05 / 2025 – Present (Bogotá, Colombia)

Gi Group

- Key participation in the company's most important project focused on the reengineering of all its functions, contributing to the technical planning of development, migrations, APIs, infrastructure, cybersecurity, and risk management, working collaboratively.
- Management of servers and services in Azure for production and testing environments, ensuring application and database availability, performance, and security.
- Full Stack application and API development using Python/Django and Java/Spring Boot to modernize internal systems.
- Implementation of transitions using microservices with RESTful APIs to enable service interoperability and support the transition of global, in-house, and vendor systems.
- Data migration and large-scale processing through ETL workflows, ensuring data consistency, integrity, and optimization.

Full Stack Software Developer and DevOps

03 / 2023 – 01 / 2025 (Bogotá, Colombia)

Consultations and Financial Intelligence Services (Conserbi)

Responsibilities:

- Full Stack development using Python and Django, with Docker containers for efficient deployment of B2B and SaaS applications on web services (Azure, AWS).
- Management of relational and non-relational databases, optimizing queries and ensuring secure data persistence.
- Creation and maintenance of REST APIs (FastAPI) for service integration, user management, permissions, and authentication.
- Development of dynamic graphical interfaces using Angular, Bootstrap, Highcharts, and Tabulator for data visualization and analysis.
- Use of backend technologies such as Celery, Redis, and Flower for asynchronous task management and real-time monitoring.
- Implementation of systems for bulk file uploads, analysis, and visualization of large data volumes (ELT).

Achievements:

- I delivered and deployed modules in a production environment within established deadlines, ensuring availability for end-users.
- I developed a bulk file upload system for credit data, ensuring efficiency in processing large data volumes.
- I implemented customized functionalities for each company, adapting data analysis and visualization to the specific needs of each client.
- I optimized database queries, improving performance and application loading speed.
- I created multiple interactive charts and dynamic tables to facilitate decision-making based on data.
- I developed a permissions system that assigns specific roles to users, restricting access to views and functionalities within Django according to each user's profile.

Full Stack Software Developer

08 / 2022 – 12 / 2022 (Bogotá, Colombia)

Jaivaná

- Creation of new functionalities, optimization, and problem-solving using Java connected to databases, text files (txt, xlsx), and Jasper formats.
- Data persistence with PostgreSQL connected to the main software, executing various commands for creating, editing, querying, and managing entity functionalities.
- Collaborative work using several GIT commands and agile methodologies: Jira and Bitbucket.
- Creation and modification of various types of graphical interfaces in Java directly connected to program logic and the database, all within the same software environment.
- Creation and modification of Jasper formats connected to the code and the database.

Full Stack Software Developer

08 / 2021 - 03 / 2022 (Bogotá, Colombia)

University of the Andes

- Editing the logic, functions, and behavior of web pages related to publications using JavaScript.
- Creation and consumption of microservice APIs using ReactJS architecture and testing REST functionalities with Postman.

- Data persistence with PostgreSQL and MySQL, executing various commands for creating, editing, querying, and managing entity functionalities.
- Implementation of HTML and CSS to add, remove, and update elements within the graphical interface.
- Structuring specific information related to university publications using XML.

EDUCATION:

Bachelor's Degree in Telematics Engineering

Universidad Distrital Francisco José de Caldas

09 / 2022 – 07 / 2025 (Bogotá, Colombia)

Diploma in Cloud Analyst

Universidad de los Andes

03 / 2023 – 9 / 2023 (Bogotá, Colombia)

Diploma in Full Stack Software Development

Universidad Tecnológica de Pereira

04 / 2022 – 12 / 2022 (Bogotá, Colombia)

Technologist in Data Systematization

Universidad Distrital Francisco José de Caldas

08 / 2017 - 06 / 2022 (Bogotá, Colombia)

Second Language: English

British Council

LANGUAGES: Spanish, English.
